environment parity 39 – 40
logs 38 – 39
one codebase, one application 37
port binding 40
stateless processes 41
telemetry 41
building with Spring 42 – 51
building Spring Boot application 43 – 51
Spring landscape 42 – 43
containerizing applications with Docker 51 – 56
images and containers 52 – 54
running Spring application as container 55 – 56
management and monitoring 479 – 484
exposing application information 481 – 482
Flyway migrations in Spring Boot 480 – 481
generating and analyzing heap dumps 483 – 484
managing containers with Kubernetes 57 – 62
deployments, pods, and services 58 – 59
running Spring application on Kubernetes 59 – 62
Polar Bookshop 62 – 67
exploring patterns and technologies used in project 63 – 67
requirements of system 62 – 63
Cloud Native Buildpacks 26
building container images 197
containerizing native images with 564 – 565
containerizing Spring Boot with 197 – 201
cloud native development
bootstrapping cloud native project 72 – 75
dependency management with Gradle and Maven 73 – 75
one codebase, one application 72 – 73
building RESTful application with Spring MVC 82 – 94
data validation and error handling 90 – 93
evolving APIs for future requirements 94
implementing REST API with Spring MVC 87 – 90
REST API first, business logic later 82 – 87
deployment pipeline 103 – 110
commit stage of 104 – 105
implementing commit stage with GitHub Actions 105 – 110
testing RESTful application with Spring 94 – 103
integration tests with @SpringBootTest 97 – 99
testing JSON serialization with @JsonTest 101 – 103
testing REST controllers with @WebMvcTest 100 – 101
unit tests with JUnit 5 96 – 97
working with embedded servers 75 – 81
configuring embedded Tomcat 80 – 81
executable JARs and embedded servers 76 – 78
thread-per-request model 78 – 80
