RUNNING THE APPLICATION

You are done implementing the application, so you can go ahead and run it. There are different ways to do that, and I will show you some of them later. For now, you can use the task provided by the Spring Boot Gradle plugin: `bootRun`.

From the same Terminal window where you launched the tests, run this command:

```
$ ./gradlew bootRun
```

The application should be up and running in a second and ready to accept requests. In figure 2.6 you can see the logs streamed during the startup phase.

```
  .   ____          _            __ _ _
 /\\ / ___'_ __ _ _(_)_ __  __ _ \ \ \ \
( ( )\___ | '_ | '_| | '_ \/ _` | \ \ \ \
 \\/  ___)| |_)| | | | | || (_| |  ) ) ) )
  '  |____| .__|_| |_|_| |_\__, | / / / /
