

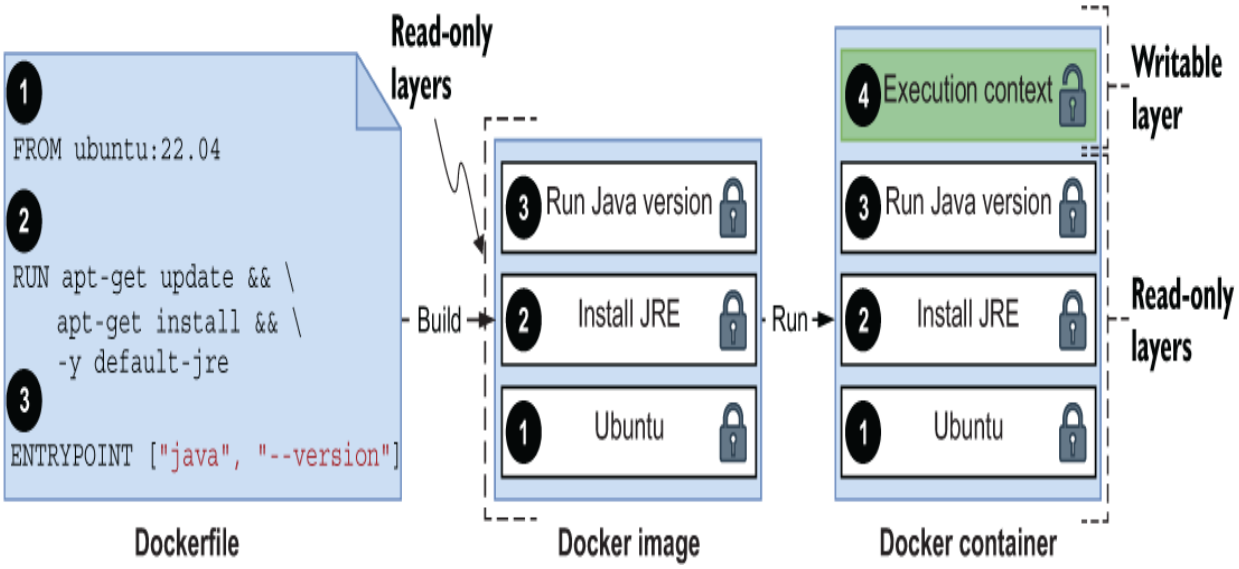

Figure 6.4 Images are built starting from Dockerfiles. Each instruction in a Dockerfile results in an ordered sequence of layers in the image.

Now open a Terminal window, navigate to the my-java-image folder where your Dockerfile is located, and run the following command (don't forget the final dot).

```
$ docker build -t my-java-image:1.0.0 .
```

The command syntax is explained in figure 6.5.
