Create a project folder
Add smart contract and compile
Configure blockchain network
Deploy the smart contract
4.4 Develop and configure the web application
Develop ballot-app
Launch the ballot-app
Install MetaMask wallet
Interact with Ballot-Dapp
Connect web client to smart contract
4.5 Retrospective
4.6 Best practices
4.7 Summary
Part 2. Techniques for end-to-end Dapp development
5 Security and privacy
5.1 Cryptography basics
Symmetric key cryptography
Asymmetric key cryptography
5.2 The relevance of public-key cryptography to blockchain
Generating Ethereum addresses
Transaction signing
Deploying smart contracts on Ropsten
Using the private key in mnemonic form
Populating a blockchain wallet
Deploying and transacting on Ropsten
5.3 Hashing basics
Digital signing of documents
Hashed data on distributed ledger
