- `register()` *function* --Any airline can self-register with a deposit. Make sure that the `fromAirline` account is selected in the Account drop-down list in the top-left panel. This function needs two parameters: the account address and the escrow value. The account address is *implicitly provided* by `msg.sender`. Enter `50 ether` for the escrow value; then click the Register button to execute the function. Repeat the same process for the `toAirline` address in the Account box.
