

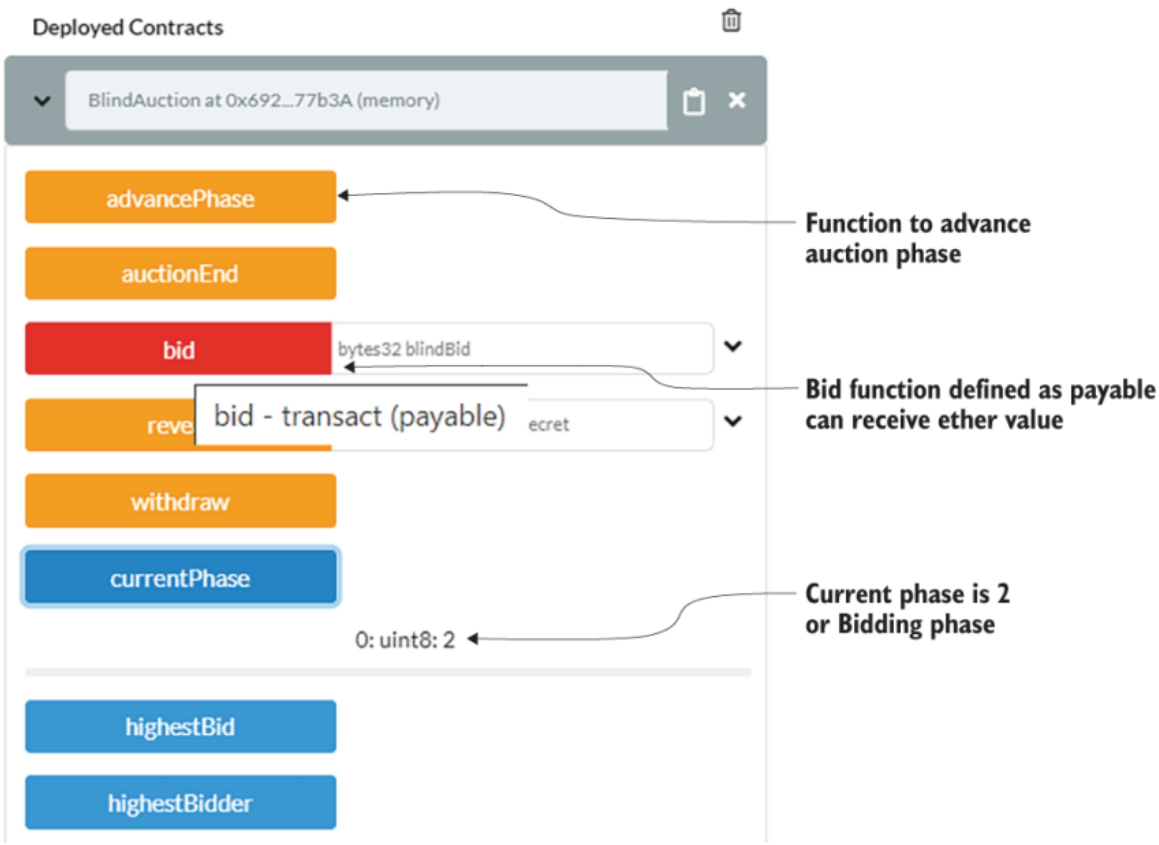

Figure 6.5 Remix UI showing the BlindAuction contract with updated `advancePhase()` function

> **NOTE** Figure 6.5 depicts the latest version of Remix at the time of this writing. You must be aware that these tools keep changing their layout and color schemes to improve user experience. But the underlying features are mostly the same: edit, compile, deploy, and run interactions.

Let's now see how to consume (or use) these triggered events to notify users of phase changes through the blind auction web UI. You'll use the Truffle IDE to build the contract module, `auction-contract`, and Node Package Manager (npm) and Node.js for the `auction-app` module.

6.2.3 Testing with the web UI
