2. *Send a request.* For Account 2 in MetaMask, fill in these parameter values to request two seats from row 1 of the ASK display table:

```
{reqID = 123, flightID = 1, passengerID = 234, numSeats = 2,
➥ <toAirline address>}
```

   For the `toAirline` address, copy the address of Account 3 provided in the left panel of the web UI for your convenience, and click ASK Request.

3. *Send a response.* For Account 3 in MetaMask, fill in these parameter values for the response:

```
{reqID = 123, success = true, <fromAirline address>}
```

   For the `fromAirline` address, copy the address of Account 2 provided in the left panel of the web UI for your convenience, and click ASK Response.

4. *Settle payment.* For Account 2, enter `{reqId =123, numSeats = 2, <toAirline address>},` and click Settle Payment. You'll find that the payment is settled for two seats, and the table on the left is updated.
5. You'll also notice the ASK Available seats table on the UI getting updated to reflect the seats transferred.
6. You can try to `unregister()` and `replenish()` for either of the two accounts registered. If you try these for an unregistered account, the operations should revert and throw an error because of the modifier `onlyMember` that checks for membership.
