2. Lock any open accounts by clicking their icons and then clicking Lock.
3. Choose the Ropsten test network (step 2 in figure 8.5) in MetaMask.
4. Click Import Using Account Seed Phrase to recover accounts (step 3 in figure 8.5).

The MetaMask page displayed is shown in figure 8.7, along with the interface for entering the seed phrase (mnemonic) and a password. After you enter the data, it restores (or reconnects to) accounts in the MetaMask interface, with only account 1 showing up initially. You can always create more accounts by clicking the Create Account option in MetaMask.
