- React hooks like `useChat` and `useCompletion` are available for creating conversational UI and text completion capabilities.
- Implementing streaming responses with the SDK has challenges like asynchronous processing, connection management, data buffering, and error handling.
- The SDK abstracts away many of these low-level details to simplify handling streaming responses in web applications.
- The SDK uses language model specification to simplify working with different AI providers and models.
- The integration of the SDK enhances functionality and user experience by enabling streaming chat, multiple AI provider support, and integration of OpenAI's vision capabilities.
