8 *Testing and debugging techniques 232*

8.1 Debugging Next.js AI applications 233

Debugging common Next.js rendering Issues 233 ▪ Debugging client–server problems 237 ▪ Handling state management 238 Performance monitoring 239

8.2 Vercel AI SDK troubleshooting 241

Handling error states in AI-generated content 242 Managing token limits and rate limiting 246

8.3 Troubleshooting LangChain.js 250

Chain execution errors 251 ▪ Troubleshooting model integration problems 254

8.4 Testing strategies for AI applications 256

Unit and integration testing in React and Next.js 256 Mocking LLM responses 258 ▪ Testing Vercel AI SDK responses 260 ▪ Testing LangChain.js 264

9 *Deployment and security 268*

9.1 Building a secure foundation with input validation, rate limits, and middleware 269

Input validation 270 ▪ Security middleware layer 273

9.2 Building a core security and data protection pipeline 275

9.3 Setting up authentication and authorization 275

Simple authentication with Clerk.js and Next.js 277 Practical security control: Rate limiting 280

9.4 API key and secrets management 285

Understanding Next.js environment variables 285 Application-level API keys 286 ▪ User-provided API keys 286

9.5 Data protection and compliance 288

Example: Adding anonymization to our chat messages 288

9.6 Deployment considerations for AI web applications 291

Deployment options 291 ▪ Production deployment checklist 292 Example deployment to Vercel 294 ▪ Alternative deployments: Netlify 299 ▪ Alternative deployments: Hugging Face Spaces 300 ▪ Next steps 300
