Listing 5.5 Few-shot learning prompt

```
const prompt = `
  List some popular programming languages along with
a brief description of each:

  1. JavaScript: A versatile language primarily used for web development.
  2. Python: Known for its readability and used in data
science and web development.
  3. Java: A widely-used language for building
enterprise-level applications.

  4.`;
```

This part of the prompt sets the context for the task, asking the AI to list popular programming languages with descriptions.

The first three items provide examples of programming languages and their descriptions, guiding the model on the expected format.

The prompt ends with an incomplete list item (4.), which may prompt the AI to generate additional examples to complete the list.

To execute this example, run the script using Node.js with the following command when within the ch05 folder while making sure you have your Google API key provided in an .env file beforehand:

```
$ node few-shot-learning.google.js
```

This will print some programming language details similar to figure 5.6.

```
● % node few-shot-learning.google.js                                    (main)
  Generated Programming Languages: Here are some more popular programming languages:

  4.  **C#**: A modern, object-oriented language developed by Microsoft, widely used for Window
  s desktop applications, web development (ASP.NET), and game development (Unity).
  5.  **C++**: A powerful, high-performance language used for systems programming, game develop
  ment, embedded systems, and applications requiring direct hardware access.
  6.  **PHP**: A server-side scripting language primarily used for web development, powering a
  large percentage of websites and web applications.
  7.  **Swift**: Apple's modern, powerful, and intuitive programming language for building apps
   across all Apple platforms (iOS, macOS, watchOS, tvOS).
  8.  **Go**:
  Chatbot Responses: I'm sorry to hear you're having trouble with your Wi-Fi disconnecting. Tha
  t can be really frustrating! Let's try to figure out what's going on. To start, could you tel
  l me:

  1.  **What type of device are you using when you experience the disconnections?** (e.g., lapt
  op, phone, tablet)
  2.  **Have you tried restarting your modem and router?** This is often the first and easiest
  fix.
  3.  **Are other devices in your home also experiencing the same Wi-Fi disconnections?** This
  will help determine if the problem is with your device or the network itself.
```

Figure 5.6 The output of the few-shot learning responses from the AI model

Note that the wording of the prompt does not specify how many programming languages the AI model should list. In my machine, it generated about 15 examples, but
