

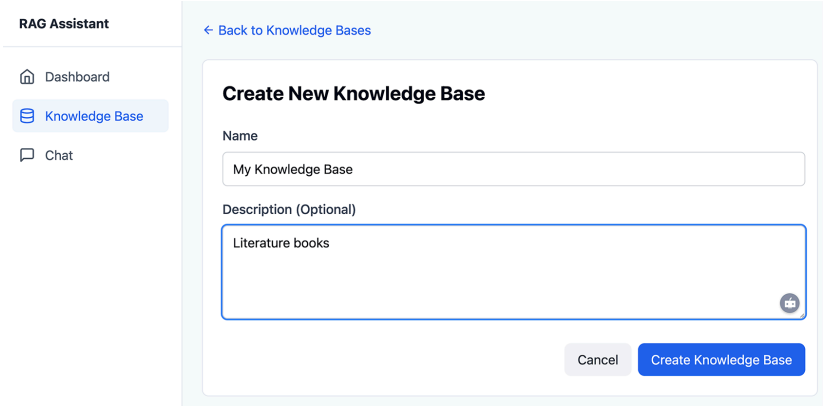

Figure 11.3 Users need to fill in a name and optionally a description to create a new knowledge base.

By clicking the Upload Document button, users are directed to a page containing instructions on how to upload files. Users can select a document from their local filesystem—supported formats include PDF and DOCX—and submit it to the application.

Once uploaded, the application parses and analyzes the document, converting its content into vector embeddings. These embeddings are then stored in the Upstash Vector database, enabling efficient similarity search. This process allows users to chat with the document content in real time through the conversational AI agent. Figure 11.4 shows a screenshot of the upload page showcasing the user interface.

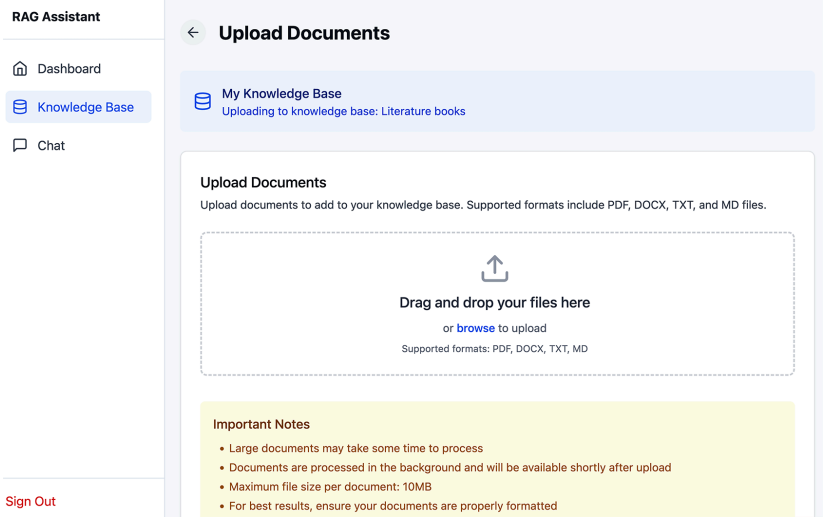

Figure 11.4 The upload documents page allows users to submit documents that can be used for chat-like interactions.
