NOTE Always keep your API key confidential. Never commit it to version control or share it publicly.

By using this repository and following these instructions, you'll be able to run and experiment with all the examples from the book, enhancing your learning experience with hands-on practice. Most projects default to using Google's Gemini Flash model, which is free to use with a Google Cloud account—so you can complete all the examples at no cost if you use the default setup.

If you prefer to use OpenAI models instead, be aware that OpenAI requires a minimum of $5 in credits to activate API access. Running the examples with OpenAI models will generally cost no more than $1 to $2 total, as long as you avoid uploading large documents or books—particularly in the later chapters involving embeddings or fine-tuning.

A.3 Accessing Google AI APIs

If you are having trouble accessing the OpenAI API because of no available credits, then Google AI's Gemini API is a strong alternative. Unlike OpenAI, Gemini provides a free usable tier that allows you to experiment and test without immediate billing, making it more accessible for developers and learners.

Follow these steps to generate an API key for Google AI at the provided link:

1. Visit the Google AI Studio at https://aistudio.google.com/app/apikey. If you are not already signed in, click the Sign In button. Use your Google account credentials to log in. If you do not have a Google account, you will need to create one.
2. Access the API key section. Once signed in, navigate to the API key section of the Google AI Studio and click the Create API Key button (see figure A.3).
