M

machine learning, defined 13
malware scanning 326
max tokens 39, 41, 134–136
maxWords 145
MCP (Model Context Protocol) 331
  architecture 333
  extending web applications 341–345
  future of 349–352
  importance of 332
  integrating web apps with
    architecture overview 335, 346
    benefits of using MCP for web applications with LLMs 340
    building end-to-end integration with LangChain.js 347–349
    building end-to-end integration with MCP in Next.js 336–340
    connecting Next.js and Vercel AI SDK with 334–341
    frontend 348
    integrating MCP servers with LangChain.js 345–349
  next steps with servers 352
mcpreg CLI tool 351
memory components 185–188
memory profiling 240
messages prompts 138
MFA (multifactor authentication) 277
middleware
  configuration 278
  layer 273–275
minWords 145
mocking LLM responses 143, 258
  challenges and concerns of 258
  exposing implementation details 259
  what to mock vs. what not to mock 259
MockLanguageModelV1 260
model fallbacks 246
model integration problems 254–255
models
  choosing 12–13
  performance considerations 13
  types of 12
model serving frameworks 7
MultiHop-RAG 218
multimedia content, enhancing conversational UIs with 79–86
  caveats of 82
  Gemini vision queries 83–86
  OpenAI vision capabilities 80–82
  overview of 80
multimedia generation 4
multimodal AI 81
MultiServerMCPClient 346

N

nested layout for blog section 48
Netlify, alternative deployments 299
network monitoring 240
next/cache module 237
next/dynamic module 52
Next.js
  authentication with Clerk.js and 277–280
  configuration on 45–52
  debugging 233–241
  environment variables 285–287
  generative AI web application 43–44
  input validation of API handler 271
  integrating web apps with MCP 334–341
  routing on 45–52
  separating AI and UI state in applications 103–104
  unit and integration testing in 256
nondeterministic outputs 142
npm dependencies 353
npm package 248

O

OAuth 2.0/social login 276
onFinish callback 185
onSubmit handler 84
OpenAI
  accessing APIs 354
  vision capabilities 80–82
OpenAIEmbeddings constructor 184
OpenAI/Google API 37
orchestration, defined 7
organizing prompts 139–145
  constrained validation 144
  mocking LLM responses 143
  semantic similarity scoring 144
