WEB DEVELOPMENT

Build AI-Enhanced Web Apps

Theo Despoudis

The users have spoken! Agents, personalized responses, and other LLM-powered features are required in modern web applications. **Build AI-Enhanced Web Apps** presents the end-to-end architecture of AI web apps, including UI, backend infrastructure, data processing, API integration, deployment, and scaling, with examples and language perfect for professional web developers.

This accessible book shows you how to ship real AI features—not just toy demos—using a JavaScript stack you already know: React for UI, Next.js for backend integration, and the Vercel AI SDK to connect to LLMs like Gemini and GPT. In it, you'll acquire the skills you need to complete two portfolio-ready projects: a voice-based interview assistant and a RAG-powered corporate knowledge system. You'll also learn how to design workflows that balance latency, cost, and UX and implement responsible guardrails for security, quality control, hallucinations, and bias.

What's Inside

- Build AI features using a professional stack
- Ship production-ready features
- Learn from concrete projects

For web developers familiar with JavaScript and React.

Theo Despoudis is a Senior Engineer at WP Engine specializing in AI-powered search and headless WordPress. He is an expert in integrating LLMs, RAG, and Vercel AI SDK into React and Next.js apps.
