

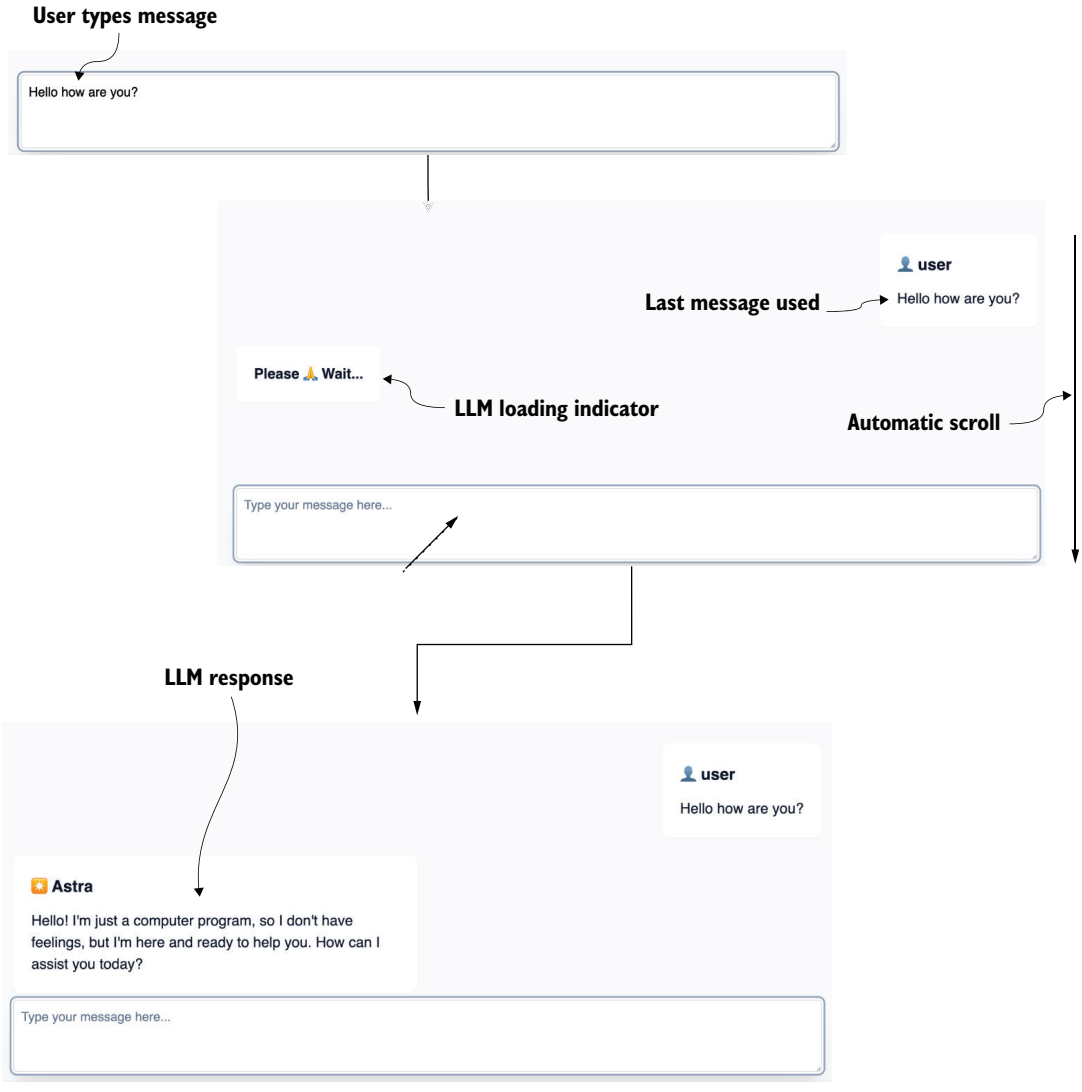

Figure 2.4 A screenshot of Astra's chat interface, showing a conversation history between the user and the AI. Notice the input prompt, a list of past messages, and a loading indicator while the AI (LLM) processes the request. Once a new message is posted, the page is automatically scrolled down.

Throughout the following chapters, we'll explore additional techniques to refine the response content itself through formatting, streaming, and customization, further enhancing the user experience when interacting with the LLM.

Keeping these UX concepts in mind, you'll see that our code example already incorporates automatic scrolling for handling long responses. When a new message arrives in the LLM response, the page will scroll to make it visible so the user doesn't have to scroll manually.
