2 *Building your first generative AI web application 19*

2.1 Introducing Astra 20

2.2 Project goal and requirements 21

Goal: Build a simple interactive AI chat interface 21
Project and technology requirements 22 ▪ Setting up 23
Running the project 24

2.3 Under the hood: The generative AI lifecycle 26

2.4 Designing for a better user experience 26

2.5 Building the major components 28

Frontend 28 ▪ Autoscroll 29vChatPage 32 ▪ ChatList 32
The backend: Handling API communication 37 ▪ Tests 41
Common challenges and solutions 42

2.6 Assessing the app's first iteration 42

2.7 Migrating the app to Next.js 43

Setting up 44 ▪ Running the project 44

2.8 Routing and configuration on Next.js 45

File-based routing 45 ▪ Configuration 46
Environment variables in Next.js 47 ▪ Route
groups 47 ▪ Layout components 48 ▪ Route API
handlers 50 ▪ Going deeper with Next.js 51

3 *Connecting AI models with the Vercel AI SDK 54*

3.1 Introducing the Vercel AI SDK 55

Key features and benefits 55 ▪ A strategic approach to
integration 56 ▪ Practical integration: The Vercel AI SDK
with Astra AI 58

3.2 Handling streaming responses with the Vercel AI SDK 61

Challenges and how the SDK solves streaming in web
applications 62 ▪ Implementing streaming with the Vercel
AI SDK 65 ▪ Integrating streaming into Astra AI 69

3.3 Working with multiple AI providers 72

Handling different AI providers and models 72 ▪ Using the
Vercel AI SDK's interoperability 73 ▪ Astra AI project: Integrating
multiple AI providers and models 76

3.4 Enhancing conversational UIs with multimedia content 79

Introducing OpenAI's vision capabilities 80 ▪ Astra AI project:
Integrating Gemini vision queries 83
