8.4.4. Improving responsiveness with concurrency

8.5. Designing concurrent code in practice

8.5.1. A parallel implementation of std::for_each

8.5.2. A parallel implementation of std::find

8.5.3. A parallel implementation of std::partial_sum

8.6. Summary

Chapter 9. Advanced thread management

9.1. Thread pools

9.1.1. The simplest possible thread pool

9.1.2. Waiting for tasks submitted to a thread pool

9.1.3. Tasks that wait for other tasks

9.1.4. Avoiding contention on the work queue

9.1.5. Work stealing

9.2. Interrupting threads

9.2.1. Launching and interrupting another thread

9.2.2. Detecting that a thread has been interrupted

9.2.3. Interrupting a condition variable wait

9.2.4. Interrupting a wait on std::condition_variable_any

9.2.5. Interrupting other blocking calls

9.2.6. Handling interruptions

9.2.7. Interrupting background tasks on application exit

9.3. Summary

Chapter 10. Testing and debugging multithreaded applications

10.1. Types of concurrency-related bugs
