```
template<typename T>
class lock_free_stack
{
private:
    std::atomic<node*> to_be_deleted;

    static void delete_nodes(node* nodes)
    {
        while(nodes)
        {
            node* next=nodes->next;
            delete nodes;
            nodes=next;
         }
    }

    void try_reclaim(node* old_head)
    {
        if(threads_in_pop==1)
        {
            node* nodes_to_delete=to_be_deleted.exchange(nullptr);
            if(!--threads_in_pop)
            {
                delete_nodes(nodes_to_delete);
            }
            else if(nodes_to_delete)
            {
                chain_pending_nodes(nodes_to_delete);
```

❶

❷ Claim list of to-be-deleted nodes

❸ Are you the only thread in pop()?
