changes to the standard at the time of writing is probably Bjarne Stroustrup's C++11 FAQ,[1] though popular C++ reference books will be revised to cover it in due course.

[1] http://www.research.att.com/~bs/C++0xFAQ.html

Hopefully the brief introduction to the new features covered in this appendix has provided enough depth to show how they relate to the Thread Library and to enable you to write and understand multithreaded code that uses these new features. Although this appendix should provide enough depth for simple uses of the features covered, this is still only a brief introduction and not a complete reference or tutorial for the use of these features. If you intend to make extensive use of them, I recommend acquiring such a reference or tutorial in order to gain the most benefit from them.
