Returns a duration such that the `count()` value is the negative value of `this->count()`.

Declaration

```
constexpr duration operator-() const;
```

Returns

```
duration(-this->count());
```

Std::Chrono::Duration::Operator++ Pre-Increment Operator

Increments the internal count.

Declaration

```
duration& operator++();
```

Effects

```
++this->internal_count;
```

Returns

```
*this
```

Std::Chrono::Duration::Operator++ Post-Increment Operator

Increments the internal count and return the value of `*this` prior to the increment.

Declaration

```
duration operator++(int);
```

Effects

```
duration temp(*this);
++(*this);
return temp;
```
