Either `lhs` must be implicitly convertible to `rhs`, or vice versa. If neither can be implicitly converted to the other, or they are distinct instantiations of `duration` but each can implicitly convert to the other, the expression is ill formed.

Returns

```
!(rhs<lhs)
```

Std::Chrono::Duration Greater-Than-or-Equals Comparison Operator

Compares two `duration` objects to see if one is greater than or equal to the other, even if they have distinct representations and/or periods.

Declaration

```
template <class Rep1, class Period1, class Rep2, class Period2>
constexpr bool operator>=(
     const duration<Rep1, Period1>& lhs,
     const duration<Rep2, Period2>& rhs);
```

Requirements

Either `lhs` must be implicitly convertible to `rhs`, or vice versa. If neither can be implicitly converted to the other, or they are distinct instantiations of `duration` but each can implicitly convert to the other, the expression is ill formed.

Returns

```
!(lhs<rhs)
```

Std::Chrono::Duration_Cast Nonmember Function

Explicitly converts a `std::chrono::duration` object to a specific `std::chrono::duration` instantiation.

Declaration
