Constructs a `time_point` object from another `time_point` object with the same `Clock` but a distinct `Duration`.

Declaration

```
template <class Duration2>
time_point(const time_point<clock, Duration2>& t);
```

Requirements

`Duration2` shall be implicitly convertible to `Duration`.

Effects

As-if `time_point(t.time_since_epoch())`

The value returned from `t.time_since_epoch()` is implicitly converted to an object of type `Duration`, and that value is stored in the newly constructed `time_point` object.

Std::Chrono::Time_Point::Time_Since_Epoch Member Function

Retrieves the duration since the clock epoch for a particular `time_point` object.

Declaration

```
duration time_since_epoch() const;
```

Returns

The `duration` value stored in `*this`.

Std::Chrono::Time_Point::Operator+= Compound Assignment Operator

Adds the specified `duration` to the value stored in the specified `time_point` object.
