```
    typedef unspecified-integral-type rep;
    typedef std::ratio<unspecified,unspecified> period;
    typedef std::chrono::duration<rep, period> duration;
    typedef std::chrono::time_point<system_clock> time_point;
    static const bool is_steady=unspecified;

    static time_point now() noexcept;

    static time_t to_time_t(const time_point& t) noexcept;
    static time_point from_time_t(time_t t) noexcept;

};
```

Std::Chrono::System_Clock::Rep Typedef

A typedef for an integral type used to hold the number of ticks in a `duration` value.

Declaration

```
typedef unspecified-integral-type rep;
```

Std::Chrono::System_Clock::Period Typedef

A typedef for an instantiation of the `std::ratio` class template that specifies the smallest number of seconds (or fractions of a second) between distinct values of `duration` or `time_point`. The `period` specifies the *precision* of the clock, not the tick frequency.

Declaration

```
typedef std::ratio<unspecified, unspecified> period;
```

Std::Chrono::System_Clock::Duration Typedef

An instantiation of the `std::chrono::duration` class template that can hold the difference between any two time points returned by the systemwide real-time clock.

Declaration

```
typedef std::chrono::duration<
    std::chrono::system_clock::rep,
```
