```
typedef std::chrono::duration<
    std::chrono::steady_clock::rep,
    std::chrono::steady_clock::period> duration;
```

Std::Chrono::Steady_Clock::Time_Point Typedef

This instantiation of the `std::chrono::time_point` class template can hold time points returned by the systemwide steady clock.

Declaration

```
typedef std::chrono::time_point<std::chrono::steady_clock>
time_point;
```

Std::Chrono::Steady_Clock::Now Static Member Function

Obtains the current time from the systemwide steady clock.

Declaration

```
time_point now() noexcept;
```

Returns

A `time_point` representing the current time of the systemwide steady clock.

Throws

An exception of type `std::system_error` if an error occurs.

Synchronization

If one call to `std::chrono::steady_clock::now()` happens-before another, the `time_point` returned by the first call shall compare less-than or equal-to the `time_point` returned by the second call.

D.1.5. std::chrono::high_resolution_clock typedef
