Effects

As-if

```
while(!pred())
{
    if(wait_until(lock,absolute_time)==std::cv_status::timeout)
        return pred();
}
return true;
```

Returns

`true` if the most recent call to `pred()` returned `true, false` if a call to `Clock::now()` returned a time equal to or later than the time specified by `absolute_time` and `pred()` returned `false`.

Note

The potential for spurious wakeups means that it's unspecified how many times `pred` will be called. `pred` will always be invoked with the mutex referenced by `lock` locked, and the function shall return if (and only if) an evaluation of `(bool)pred()` returns `true` or `Clock::now()` returns a time equal to or later than `absolute_time`. There's no guarantee as to how long the calling thread will be blocked, only that if the function returns `false`, then `Clock::now()` returns a time equal to or later than `absolute_time` at the point at which the thread became unblocked.

Throws

Any exception thrown by a call to `pred`, or `std::system_error` if the effects couldn't be achieved.
