Calls to `notify_one(), notify_all(), wait(), wait_for()`, and `wait_until()` on a single `std::condition_variable_any` instance are serialized. A call to `notify_one()` or `notify_all()` will only wake threads that started waiting *prior* to that call.

Std::Condition_Variable_Any::Wait_Until Member Function

Waits until the `std::condition_variable_any` is notified by a call to `notify_one()` or `notify_all()` or until a specified time has been reached or the thread is woken spuriously.

Declaration

```
template<typename Lockable,typename Clock,typename Duration>
std::cv_status wait_until(
    Lockable& lock,
    std::chrono::time_point<Clock,Duration> const& absolute_time);
```

Preconditions

`Lockable` meets the `Lockable` requirements, and `lock` owns a lock.

Effects

Atomically unlocks the supplied `lock` object and block until the thread is woken by a call to `notify_one()` or `notify_all()` by another thread or `Clock::now()` returns a time equal to or later than `absolute_time` or the thread is woken spuriously. The `lock` object is locked again before the call to `wait_until()` returns.

Returns

`std::cv_status::no_timeout` if the thread was woken by a call to `notify_one()` or `notify_all()` or a spurious wakeup, `std::cv_status::timeout` otherwise.
