```
std::atomic_flag flag=ATOMIC_FLAG_INIT;
```

Effects

Constructs a new `std::atomic_flag` object in the *clear* state.

Throws

Nothing.

Std::Atomic_Flag::Test_and_Set Member Function

Atomically sets the flag and checks whether or not it was set.

Declaration

```
bool test_and_set(memory_order order = memory_order_seq_cst)
volatile
     noexcept;
bool test_and_set(memory_order order = memory_order_seq_cst)
noexcept;
```

Effects

Atomically sets the flag.

Returns

`true` if the flag was set at the point of the call, `false` if the flag was clear.

Throws

Nothing.

Note
