Atomically adds the supplied value to the value stored in `*this` and returns the new value.

Declaration

```
integral-type operator+=(integral-type i) volatile noexcept;
integral-type operator+=(integral-type i) noexcept;
```

Effects

```
return this->fetch_add(i) + i;
```

Std::Atomic<Integral-Type>::Operator-= Compound Assignment Operator

Atomically subtracts the supplied value from the value stored in `*this` and returns the new value.

Declaration

```
integral-type operator-=(integral-type i) volatile noexcept;
integral-type operator-=(integral-type i) noexcept;
```

Effects

```
return this->fetch_sub(i,std::memory_order_seq_cst) – i;
```

Std::Atomic<Integral-Type>::Operator&= Compound Assignment Operator

Atomically replaces the value stored in `*this` with the bitwise-and of the supplied value and the value stored in `*this` and returns the new value.

Declaration

```
integral-type operator&=(integral-type i) volatile noexcept;
integral-type operator&=(integral-type i) noexcept;
```

Effects

```
return this->fetch_and(i) & i;
```

Std::Atomic<Integral-Type>::Operator|= Compound Assignment Operator
