Effects

```
return p->fetch_add(i);
```

Std::Atomic_Fetch_Add_Explicit Nonmember Function

Atomically reads the value from an `atomic<T*>` instance and replaces it with that value plus the supplied value `i` using standard pointer arithmetic rules.

Declaration

```
T* atomic_fetch_add_explicit(
    volatile atomic<T*>* p, ptrdiff_t i,memory_order order)
noexcept;
T* atomic_fetch_add_explicit(
    atomic<T*>* p, ptrdiff_t i, memory_order order) noexcept;
```

Effects

```
return p->fetch_add(i,order);
```

Std::Atomic<T*>::Fetch_Sub Member Function

Atomically loads a value and replaces it with that value minus the supplied value `i` using standard pointer arithmetic rules, and returns the old value.

Declaration

```
T* fetch_sub(
    ptrdiff_t i,memory_order order = memory_order_seq_cst)
    volatile noexcept;
T* fetch_sub(
    ptrdiff_t i,memory_order order = memory_order_seq_cst)
noexcept;
```

Effects

Atomically retrieves the existing value of `*this` and stores *old-value* `- i` in `*this`.
