As-if `shared_future<ResultType>(std::move(*this))`.

Postconditions

The asynchronous result associated with `*this` prior to the invocation of `share()` (if any) is associated with the newly constructed `std::shared_future` instance. `this->valid()` returns `false`.

Throws

Nothing.

Std::Future::Valid Member Function

Checks if a `std::future` instance is associated with an asynchronous result.

Declaration

```
bool valid() const noexcept;
```

Returns

`true` if the `*this` has an associated asynchronous result, `false` otherwise.

Throws

Nothing.

Std::Future::Wait Member Function

If the state associated with `*this` contains a deferred function, invokes the deferred function. Otherwise, waits until the asynchronous result associated with an instance of `std::future` is ready.

Declaration
