`this->valid()` would return `true`.

Effects

If the asynchronous result associated with `*this` contains a deferred function arising from a call to `std::async` that hasn't yet started execution, returns immediately without blocking. Otherwise blocks until the asynchronous result associated with `*this` is *ready* or `Clock::now()` returns a time equal to or later than `absolute_time`.

Returns

`std::future_status::deferred` if the asynchronous result associated with `*this` contains a deferred function arising from a call to `std::async` that hasn't yet started execution, `std::future_status::ready` if the asynchronous result associated with `*this` is *ready*, `std::future_status::timeout` if `Clock::now()` returns a time equal to or later than `absolute_time`.

Note

There's no guarantee as to how long the calling thread will be blocked, only that if the function returns `std::future_status::timeout`, then `Clock::now()` returns a time equal to or later than `absolute_time` at the point at which the thread became unblocked.

Throws

Nothing.
