```
    bool valid() const noexcept;

    see description  get() const;

    void wait() const;

    template<typename Rep,typename Period>
    future_status wait_for(
         std::chrono::duration<Rep,Period> const& relative_time)
const;

    template<typename Clock,typename Duration>
    future_status wait_until(
         std::chrono::time_point<Clock,Duration> const&
absolute_time)
    const;
};
```

Std::Shared_Future Default Constructor

Constructs a `std::shared_future` object without an associated asynchronous result.

Declaration

```
shared_future() noexcept;
```

Effects

Constructs a new `std::shared_future` instance.

Postconditions

`valid()` returns `false` for the newly constructed instance.

Throws

Nothing.

Std::Shared_Future Move Constructor
