Constructs one `std::shared_future` object from another, transferring ownership of the asynchronous result associated with the other `std::shared_future` object to the newly constructed instance.

Declaration

```
shared_future(shared_future&& other) noexcept;
```

Effects

Constructs a new `std::shared_future` instance.

Postconditions

The asynchronous result associated with `other` prior to the invocation of the constructor is associated with the newly constructed `std::shared_future` object. `other` has no associated asynchronous result.

Throws

Nothing.

Std::Shared_Future Move-from-Std::Future Constructor

Constructs a `std::shared_future` object from a `std::future`, transferring ownership of the asynchronous result associated with the `std::future` object to the newly constructed `std::shared_future`.

Declaration

```
shared_future(std::future<ResultType>&& other) noexcept;
```

Effects

Constructs a new `std::shared_future` instance.
