Destroys a `std::shared_future` object.

Declaration

```
~shared_future();
```

Effects

Destroys `*this`. If there's no longer a `std::promise` or `std::packaged_task` instance associated with the asynchronous result associated with `*this`, and this is the last `std::shared_future` instance associated with that asynchronous result, destroys that asynchronous result.

Throws

Nothing.

Std::Shared_Future::Valid Member Function

Checks if a `std::shared_future` instance is associated with an asynchronous result.

Declaration

```
bool valid() const noexcept;
```

Returns

`true` if the `*this` has an associated asynchronous result, `false` otherwise.

Throws

Nothing.

Std::Shared_Future::Wait Member Function
