If the state associated with `*this` contains a deferred function, invokes the deferred function. Otherwise, waits until the asynchronous result associated with an instance of `std::shared_future` is ready.

Declaration

```
void wait() const;
```

Preconditions

`this->valid()` would return `true`.

Effects

Calls to `get()` and `wait()` from multiple threads on `std::shared_future` instances that share the same associated state are serialized. If the associated state contains a deferred function, the first call to `get()` or `wait()` invokes the deferred function and stores the returned value or thrown exception as the asynchronous result.

Blocks until the asynchronous result associated with `*this` is *ready*.

Throws

Nothing.

Std::Shared_Future::Wait_For Member Function

Waits until the asynchronous result associated with an instance of `std::shared_future` is ready or until a specified time period has elapsed.

Declaration

```
template<typename Rep,typename Period>
future_status wait_for(
    std::chrono::duration<Rep,Period> const& relative_time) const;
```
