Waits until the asynchronous result associated with an instance of `std::shared_future` is ready or until a specified time period has elapsed.

Declaration

```
template<typename Clock,typename Duration>
bool wait_until(
    std::chrono::time_point<Clock,Duration> const& absolute_time)
const;
```

Preconditions

`this->valid()` would return `true`.

Effects

If the asynchronous result associated with `*this` contains a deferred function arising from a call to `std::async` that hasn't yet started execution, returns immediately without blocking. Otherwise, blocks until the asynchronous result associated with `*this` is *ready* or `Clock::now()` returns a time equal to or later than `absolute_time`.

Returns

`std::future_status::deferred` if the asynchronous result associated with `*this` contains a deferred function arising from a call to `std::async` that hasn't yet started execution, `std::future_status::ready` if the asynchronous result associated with `*this` is *ready*, `std::future_status::timeout` if `Clock::now()` returns a time equal to or later than `absolute_time`.

Note

There's no guarantee as to how long the calling thread will be blocked, only that if the function returns `std::future_status::timeout`, then
