`Clock::now()` returns a time equal to or later than `absolute_time` at the point at which the thread became unblocked.

Throws

Nothing.

Std::Shared_Future::Get Member Function

If the associated state contains a deferred function from a call to `std::async`, invokes that function and return the result. Otherwise, waits until the asynchronous result associated with an instance of `std::shared_future` is ready, and then returns the stored value or throws the stored exception.

Declaration

```
void shared_future<void>::get() const;
R& shared_future<R&>::get() const;
R const& shared_future<R>::get() const;
```

Preconditions

`this->valid()` would return `true`.

Effects

Calls to `get()` and `wait()` from multiple threads on `std::shared_future` instances that share the same associated state are serialized. If the associated state contains a deferred function, the first call to `get()` or `wait()` invokes the deferred function and stores the returned value or thrown exception as the asynchronous result.

Blocks until the asynchronous result associated with `*this` is *ready*. If the asynchronous result is a stored exception, throws that exception. Otherwise,
