returns the stored value.

Returns

If `ResultType` is `void`, returns normally. If `ResultType` is `R&` for some type `R`, returns the stored reference. Otherwise, returns a `const` reference to the stored value.

Throws

The stored exception, if any.

D.4.3. std::packaged_task class template

The `std::packaged_task` class template packages a function or other callable object so that when the function is invoked through the `std::packaged_task` instance, the result is stored as an asynchronous result for retrieval through an instance of `std::future`.

Instances of `std::packaged_task` are `MoveConstructible` and `MoveAssignable` but not `CopyConstructible` or `CopyAssignable`.

Class definition

```
template<typename FunctionType>
class packaged_task; // undefined

template<typename ResultType,typename... ArgTypes>
class packaged_task<ResultType(ArgTypes...)>
{
public:

    packaged_task() noexcept;
    packaged_task(packaged_task&&) noexcept;
    ~packaged_task();

    packaged_task& operator=(packaged_task&&) noexcept;

    packaged_task(packaged_task const&) = delete;
```
