`ArgTypes`-*i* in `ArgTypes...`. The return value shall be convertible to `ResultType`.

Effects

Constructs a `std::packaged_task` instance with an associated asynchronous result of type `ResultType` that isn't *ready* and an associated task of type `Callable` that's a copy of `func`. The memory for the asynchronous result and task is allocated through the allocator `alloc` or a copy thereof.

Throws

Any exception thrown by the allocator when trying to allocate memory for the asynchronous result or task. Any exception thrown by the copy or move constructor of `Callable`.

Std::Packaged_Task Move Constructor

Constructs one `std::packaged_task` object from another, transferring ownership of the asynchronous result and task associated with the other `std::packaged_task` object to the newly constructed instance.

Declaration

```
packaged_task(packaged_task&& other) noexcept;
```

Effects

Constructs a new `std::packaged_task` instance.

Postconditions

The asynchronous result and task associated with `other` prior to the invocation of the constructor is associated with the newly constructed
