Exchanges ownership of the asynchronous results associated with two `std::packaged_task` objects.

Declaration

```
void swap(packaged_task& other) noexcept;
```

Effects

Exchanges ownership of the asynchronous results and tasks associated with `other` and `*this`.

Postconditions

The asynchronous result and task associated with `other` prior to the invocation of `swap` (if any) is associated with `*this`. The asynchronous result and task associated with `*this` prior to the invocation of `swap` (if any) is associated with `other`.

Throws

Nothing.

Std::Packaged_Task Destructor

Destroys a `std::packaged_task` object.

Declaration

```
~packaged_task();
```

Effects

Destroys `*this`. If `*this` has an associated asynchronous result, and that result doesn't have a stored task or exception, then that result becomes *ready* with a `std::future_error` exception with an error code of `std::future_errc::broken_promise`.
