without making the associated asynchronous result *ready* until thread exit.

Declaration

```
void make_ready_at_thread_exit(ArgTypes... args);
```

Preconditions

`*this` has an associated task.

Effects

Invokes the associated task `func` as-if `INVOKE(func,args...)`. If the invocation returns normally, stores the return value in the asynchronous result associated with `*this`. If the invocation returns with an exception, stores the exception in the asynchronous result associated with `*this`. Schedules the associated asynchronous state to be made *ready* when the current thread exits.

Postconditions

The asynchronous result associated with `*this` has a stored value or exception but isn't *ready* until the current thread exits. Threads blocked waiting for the asynchronous result will be unblocked when the current thread exits.

Throws

An exception of type `std::future_error` with an error code of `std::future_errc::promise_already_satisfied` if the asynchronous result already has a stored value or exception. An exception of type `std::future_error` with an error code of `std::future_errc::no_state` if `*this` has no associated asynchronous state.
