Declaration

```
promise& operator=(promise&& other) noexcept;
```

Effects

Transfers ownership of the asynchronous result associated with `other` to `*this`. If `*this` already had an associated asynchronous result, that asynchronous result is made *ready* with an exception of type `std::future_error` and an error code of `std::future_errc::broken_promise`.

Postconditions

The asynchronous result associated with `other` prior to the invocation of the move-assignment operator is associated with the `*this`. `other` has no associated asynchronous result.

Returns

```
*this
```

Throws

Nothing.

Std::Promise::Swap Member Function

Exchanges ownership of the asynchronous results associated with two `std::promise` objects.

Declaration

```
void swap(promise& other);
```

Effects
