Throws

An exception of type `std::system_error` if an error occurs.

Std::Timed_Mutex::Try_Lock Member Function

Attempts to acquire a lock on a `std::timed_mutex` object for the current thread.

Declaration

```
bool try_lock();
```

Preconditions

The calling thread must not hold a lock on `*this`.

Effects

Attempts to acquire a lock on `*this` for the calling thread without blocking.

Returns

`true` if a lock was obtained for the calling thread, `false` otherwise.

Postconditions

`*this` is locked by the calling thread if the function returns `true`.

Throws Nothing.

Note

The function may fail to acquire the lock (and return `false`) even if no other thread holds a lock on `*this`.
