`*this` is locked by the calling thread if the function returns `true`.

Throws

Nothing.

Note

The function may fail to acquire the lock (and return `false`) even if no other thread holds a lock on `*this`. There's no guarantee as to how long the calling thread will be blocked, only that if the function returns `false`, then `Clock::now()` returns a time equal to or later than `absolute_time` at the point at which the thread became unblocked.

Std::Timed_Mutex::Unlock Member Function

Releases a lock on a `std::timed_mutex` object held by the current thread.

Declaration

```
void unlock();
```

Preconditions

The calling thread must hold a lock on `*this`.

Effects

Releases the lock on `*this` held by the current thread. If any threads are blocked waiting to acquire a lock on `*this`, unblocks one of them.

Postconditions
