Std::Recursive_Timed_Mutex::Try_Lock_For Member Function

Attempts to acquire a lock on a `std::recursive_timed_mutex` object for the current thread.

Declaration

```
template<typename Rep,typename Period>
bool try_lock_for(
    std::chrono::duration<Rep,Period> const& relative_time);
```

Effects

Attempts to acquire a lock on `*this` for the calling thread within the time specified by `relative_time`. If `relative_time.count()` is zero or negative, the call will return immediately, as if it was a call to `try_lock()`. Otherwise, the call blocks until either the lock has been acquired or the time period specified by `relative_time` has elapsed.

Returns

`true` if a lock was obtained for the calling thread, `false` otherwise.

Postconditions

`*this` is locked by the calling thread if the function returns

`true`.

Throws

Nothing.

Note
