`other.owns_lock()` prior to the call. `other.owns_lock()` is equal to the value of `this->owns_lock()` prior to the call.

Throws

Nothing.

Swap Nonmember Function for Std::Unique_Lock

Exchanges ownership of their associated mutex locks between two `std::unique_lock` objects.

Declaration

```
void swap(unique_lock& lhs,unique_lock& rhs) noexcept;
```

Effects

```
lhs.swap(rhs)
```

Throws

Nothing.

Std::Unique_Lock::Lock Member Function

Acquires a lock on the mutex associated with `*this`.

Declaration

```
void lock();
```

Preconditions

```
this->mutex()!=NULL, this->owns_lock()==false.
```

Effects
