D.6.9. std::ratio_greater class template

The `std::ratio_greater` class template provides a mechanism for comparing two `std::ratio` values at compile time, using rational arithmetic.

Class definition

```
template <class R1, class R2>
class ratio_greater:
    public std::integral_constant<bool,ratio_less<R2,R1>::value>
{};
```

Preconditions

`R1` and `R2` must be instantiations of the `std::ratio` class template.

D.6.10. std::ratio_less_equal class template

The `std::ratio_less_equal` class template provides a mechanism for comparing two `std::ratio` values at compile time, using rational arithmetic.

Class definition

```
template <class R1, class R2>
class ratio_less_equal:
    public std::integral_constant<bool,!ratio_less<R2,R1>::value>
{};
```

Preconditions

`R1` and `R2` must be instantiations of the `std::ratio` class template.

D.6.11. std::ratio_greater_equal class template

The `std::ratio_greater_equal` class template provides a mechanism for comparing two `std::ratio` values at compile time, using
