rational arithmetic.

Class definition

```
template <class R1, class R2>
class ratio_greater_equal:
    public std::integral_constant<bool,!ratio_less<R1,R2>::value>
{};
```

Preconditions

`R1` and `R2` must be instantiations of the `std::ratio` class template.

D.7. <thread> header

The `<thread>` header provides facilities for managing and identifying threads and provides functions for making the current thread sleep.

Header contents

```
namespace std
{
    class thread;

    namespace this_thread
    {
        thread::id get_id() noexcept;

        void yield() noexcept;

        template<typename Rep,typename Period>
        void sleep_for(
            std::chrono::duration<Rep,Period> sleep_duration);

        template<typename Clock,typename Duration>
        void sleep_until(
            std::chrono::time_point<Clock,Duration> wake_time);
    }
}
```

D.7.1. std::thread class
