Compares two instances of `std::thread::id` to see if they represent different threads of execution.

Declaration

```
bool operator!=(std::thread::id lhs,std::thread::id rhs) noexcept;
```

Returns

```
!(lhs==rhs)
```

Throws

Nothing.

Std::Thread::Id Less-Than Comparison Operator

Compares two instances of `std::thread::id` to see if one lies before the other in the total ordering of thread ID values.

Declaration

```
bool operator<(std::thread::id lhs,std::thread::id rhs) noexcept;
```

Returns

`true` if the value of `lhs` occurs before the value of `rhs` in the total ordering of thread ID values. If `lhs!=rhs`, exactly one of `lhs<rhs` or `rhs<lhs` returns `true` and the other returns `false`. If `lhs==rhs`, `lhs<rhs` and `rhs<lhs` both return `false`.

Throws

Nothing.

Note
